

Peter Calabrese

peter@calabrese.dev • (516) 647-2788 • New York, NY

Full-stack Software Engineer with 5+ years building enterprise React applications and scalable backend services.
Expertise in TypeScript, Java/Spring Boot, and Azure cloud solutions.

Education

Farmingdale State College, Farmingdale, NY

Bachelor of Science in Computer Programming and Information Systems Major GPA: 3.51 | December 2020

Technical Skills

Frontend: React, React Native, TypeScript, JavaScript, React Router, MUI

Backend: Java, Spring Boot, REST APIs

Cloud & DevOps: Azure, Azure Serverless Functions, CI/CD

Certifications: AZ-900: Microsoft Certified: Azure Fundamentals

Databases: PostgreSQL

Tools: Git, MSAL (Authentication)

Work Experience

SUMITOMO MITSUI BANKING CORPORATION

VP, Senior Software Engineer | CMS Project Dec 2024 - Present

- Contributed to the rebuild and successful launch of a modern Cash Management System, developing a responsive React frontend and helping establish a microfrontend architecture using Vite Module Federation.
- Built backend services with Java and Spring Boot, developing REST APIs, implementing business logic, and integrating PostgreSQL queries to support new and existing functionality.
- Developed high-throughput Azure Functions that automatically scaled to process large volumes of background requests.
- Created Azure monitoring dashboards using Application Insights metrics, custom events, and KQL queries, providing management with visibility into application usage, payment activity, and transaction KPIs.
- Coordinated feature migrations and system improvements across six cross-functional teams spanning design, QA, product, infrastructure, and DevOps, ensuring frontend and backend changes integrated successfully with CI/CD pipelines.
- Built an AI-assisted localization tool that transformed i18n JSON files for the Azure AI Translator API and reconstructed translated responses while preserving directory structures, nested keys, and locale-specific files.
- Designed a caching system that prevented redundant translations by tracking source file paths, nested key paths, English source text, and completed locales, reducing unnecessary API usage.
- Published translations through an npm package with a custom useTranslation hook, enabling consistent localization across multiple microfrontends.
- Implemented Azure App Configuration feature flags to restrict unapproved languages in production while making AI-generated translations available in release and QA environments for business testing and approval.

SUMITOMO MITSUI BANKING CORPORATION

VP, Software Engineer | ALPS Project Apr 2022 - Dec 2024

- Led the front-end development team for the internal loan processing application, digitizing processes utilized by 20+ groups and 4 departments.
- Integrated TypeScript across the entire application, enhancing code quality and boosting developer productivity by an estimated 20%.
- Utilized Context and Reducer for efficient global state management, fostering a more predictable and maintainable application state within the ALPS application.
- Deployed React Router for streamlined and intuitive navigation, ensuring a seamless user experience.
- Integrated Ant Design (AntD) to uphold a consistent and professional UI, optimizing the development of user interface components.
- Incorporated MSAL React for Single Sign-On (SSO), which secured application access for over 1,500 internal users.

SUMITOMO MITSUI BANKING CORPORATION

Associate, Business Analyst | ALPS Project Oct 2021 - Apr 2022

- Collaborated with senior management to define and present the technical roadmap for the loan digitization tool.
- Created initial wireframes for the loan digitization tool, helping define visual direction and design standards.
- Collaborated with 4 departments to document and map 15+ complex manual loan processing workflows for future digitization.
